

# Power Automate Interview Question & Answers.

## 1. What is Power Automate?

Power Automate is a cloud-based service that automates work flows across a variety of apps & services.

## 2. What are the components of Power Automate?

Power Automate is made up of several components that work together to create automated work flows. The main components of Power Automate are:

- Flows
- Connectors
- Actions
- Triggers
- Expressions
- Templates

## 3. What are triggers in Power Automate?

Triggers in Power Automate are events that starts a work flow. There could be a new item is added to share point list, a new file is added to share point document library, a new email, a new file added to share point folder or a new record added to database among others.

## 4. What are Actions in Power Automate?

Actions in Power Automate are the steps that follow a trigger. They could be sending an email, creating file or updating a record in a database or reading a files from share point or any other external data source. To create a successful flow, we must have at least one action in a flow, otherwise we cannot save flow.
